

MODULE 4

End-to-End Workflow

Excel Online · PowerPoint Online · Copilot | Putting it all together

Day 2 • 11:30 – 13:00

THIS MODULE SPANS THE FULL DATA LIFECYCLE

FOUR KEY PRINCIPLES FROM THIS MODULE

- Application is the test — you don't fully know a skill until you've applied it without a worked example to follow.
- Imperfect and complete beats perfect and unfinished — under time pressure, prioritisation is the skill.
- Specific commitments beat general intentions — 'I will use XLOOKUP next time I open the compliance tracker' changes behaviour. 'I will use Excel more' does not.
- Reflection closes the loop — applying a skill and then articulating how you applied it is how it becomes durable.

THE END-TO-END WORKFLOW AT A GLANCE

Step	Stage	What you do	Module 1–3 skill
1	Access	Open the dataset. Do a first-look audit — identify quality issues before touching anything.	M1 Block 1: First-look audit checklist
2	Clean	Fix duplicates, blanks, formatting issues. Convert to a Table.	M1 Block 2: Cleaning checklist
3	Analyse	Apply COUNTIF, SUMIF, XLOOKUP as needed. Build a PivotTable to explore the data.	M1 Blocks 3–5: Formulas, XLOOKUP, PivotTables
4	Visualise	Choose the right chart type. Build and format it. Write an insight-led title.	M2 Blocks 1–2: Chart chooser, declutter checklist
5	Communicate	Structure the output using Context → Insight → Recommendation. Use Copilot for first-draft narrative if helpful.	M2: CIR framework M3 Blocks 1–3: Copilot in PPT/Word/Outlook
6	Validate	Review everything before sharing — accuracy, completeness, tone, Barts Health fit.	M3 Block 4: Validation checklist

PEER REVIEW — THREE QUESTIONS

What is clear?	What does the output communicate immediately? What would a senior stakeholder understand at first glance?
What is missing?	What would the stakeholder need to ask about, or might misunderstand without additional context?

What would you change?

If you had the same brief, the same data, and the same time — what one thing would you do differently?

YOUR ACTION PLAN — COMMIT TO SOMETHING SPECIFIC

Pick one or two. Write them down. Tell someone.

- Run the first-look audit checklist the next time you open a dataset you did not create yourself. (M1 Block 1)
- Apply the cleaning checklist before building any formulas or charts. (M1 Block 2)
- Replace VLOOKUP with XLOOKUP in the next shared file you work on. (M1 Block 4)
- Write insight-led chart titles on any visual included in your next stakeholder report. (M2 Block 2)
- Use the Context → Insight → Recommendation structure for your next data communication. (M2)
- Use the five-component prompt structure the next time you use Copilot for a work task. (M3 Block 1)
- Run the validation checklist on any Copilot output before you share or use it. (M3 Block 4)

POST-SESSION REINFORCEMENT — 30 DAYS

Resource	What it covers
Module recap guides	One-page references for formulas, cleaning steps, chart type selection, prompting, and the CIR framework
Challenge tasks	Four short exercises over 30 days, each based on a realistic Barts Health scenario, completable in under 30 minutes
Copilot prompt library	Ready-to-use templates for: compliance summary emails, meeting action notes, report narrative drafts, formula generation
30-day check-in	Brief facilitator conversation to measure confidence, surface any barriers, and identify if anything needs revisiting

The goal of this programme is not skills you used once in a training room.

It is confident, independent decision-making across the full data-to-insight workflow — every time a dataset lands in your inbox.
